PROFESSIONAL SUMMARY

CSE graduate who built a production-grade AI pipeline from scratch – **94% accuracy across 180 CVs and 375+ pages** of validation data – using Python, LLM APIs, and multi-stage data processing. Strong in software engineering fundamentals, REST APIs, database systems, and backend development. Immediate joiner, Dhaka-based.

TECHNICAL SKILLS

Languages:	Python, PHP, JavaScript, SQL, Java, C, HTML5, CSS
Backend & APIs:	REST API Design, Server-side logic, FastAPI (learning), JSON, TCP/IP, Linux
Databases:	MySQL – schema design, joins, query optimization, data normalization
AI / ML:	LayoutLMv3, Hugging Face Transformers, Qwen2 LLM API, Tesseract OCR, NLP pipelines
MS Office:	MS Excel (data entry, filtering, formulas, sorting, reporting), MS Word, MS PowerPoint
Tools:	Git, GitHub, VS Code, Linux CLI

THESIS – AI & BACKEND SYSTEM (PYTHON)

Automated Form Filling from Document Images via Multi-Modal NLP & LLMs 2024 - 2025

B.Sc Thesis - Daffodil International University | Python, LayoutLMv3, Qwen2, Tesseract OCR

- Designed a complete Python backend pipeline: document ingestion → OCR extraction → LLM API reasoning → structured output
- Achieved **94% field-filling accuracy** across **180 CVs and 375+ pages** of validation data
- Integrated Hugging Face Transformer models with Qwen2 LLM API for contextual data understanding and inference
- Implemented modular, decoupled Python architecture: extraction, inference, and mapping layers cleanly separated
- Conducted performance benchmarking, error analysis, and iterative model tuning across the full dataset
- Produced detailed research documentation, methodology reports, and performance evaluation independently

PROJECTS

BusBd - Bus Transport Information System github.com/mdahidulislam5113-gif/busbd

PHP, JavaScript, MySQL, HTML5, CSS

- Built full-stack web application with server-side APIs, route/schedule management, and relational database integration
- Designed normalized database schema; implemented query optimization and end-to-end transaction logic
- Handled user request routing, input validation, and report generation for transport operations

Study Share - Academic Resource Sharing Platform github.com/mdahidulislam5113-gif/StudyShare

JavaScript, HTML5, CSS | Live: ahidnahid.github.io

- Developed resource discovery platform with dynamic content loading, RESTful fetch calls, and client-side filtering
- Deployed live portfolio and project showcase at ahidnahid.github.io

EDUCATION

B.Sc in Computer Science & Engineering - Daffodil International University CGPA: 3.32/4.00 2025

Relevant: DSA, Database Systems, AI, Data Mining & ML, Operating Systems, Computer Networks, Software Engineering, Information Security

HSC - Mohammadpur Govt. College GPA: 4.08 2019

SSC - Dhaka Shiksha Board Laboratory School & College GPA: 4.95 2017

ADDITIONAL INFORMATION

Portfolio:	ahidnahid.github.io – live projects and work showcase
Availability:	Immediate joiner - Dhaka (On-site or Hybrid)
Currently Learning:	FastAPI, Docker, PostgreSQL, cloud deployment (AWS/GCP)
Languages:	Bengali (Native), English (Professional proficiency)

CERTIFICATIONS & SELF-LEARNING

Completed:	Git & GitHub Fundamentals, Linux CLI Essentials, Python data processing (coursework-based)
Self-Learning:	FastAPI official tutorial series, Docker for Developers, PostgreSQL, Advanced Excel
Resources:	Official docs, ArjanCodes (Python architecture), freeCodeCamp, Tech With Tim
